

## BEEM - Android XMPP - Bug #321

### Exception when username does not have an @

12/17/2010 11:47 AM - Anonymous

<b>Status:</b>	Closed	<b>Start date:</b>	12/17/2010
<b>Priority:</b>	Normal	<b>Due date:</b>	
<b>Assignee:</b>	Nikita Kozlov	<b>% Done:</b>	100%
<b>Category:</b>	XMPP	<b>Estimated time:</b>	0.00 hour
<b>Target version:</b>	0.1.5	<b>Locale:</b>	
<b>Affected version:</b>	0.1.x		
<b>Description</b>			
If you set your own server, and your username does not have an @, beem will crash on connect.			

#### Associated revisions

##### Revision 844:30d32b73be7c - 01/16/2011 12:44 PM - Nikita Kozlov

fix Bug #321

I have commented the PrivacyListManagerAdapter initialization because the exception came from the underneath code. Also, since the feature isn't finished (especially tested) and enabled in the gui, it will be safer.

#### History

##### #1 - 12/17/2010 11:57 AM - Nikita Kozlov

- Category set to XMPP
- Status changed from New to Assigned
- Assignee set to Nikita Kozlov
- Target version set to 0.1.5
- Affected version changed from 0.2 to 0.1.x

##### #2 - 12/19/2010 12:33 AM - Nikita Kozlov

I cannot reproduce the issue when using the trunk version, need more info or it may already be fixed.

##### #3 - 12/19/2010 12:34 AM - Nikita Kozlov

- Status changed from Assigned to Feedback

##### #4 - 12/31/2010 06:38 PM - m c

Same bug here. Using:

User: user@server

Password: password

Server: server

works but return "wrong password or user". Indeed my login should be "user"

Using:

User: user

Password: password

Server: server

Does not work, Beem terminates. When starting again, Beem tries to connect automaticaly and ... terminates again. I have about 1seconde to press "abort".

##### #5 - 01/02/2011 06:02 PM - Frédéric Barthéléry

Can you provide us a stack trace with logcat ? I cannot reproduce the problem too.  
Your username should be a full JID ; user@server. only the user part is used to authenticate.

#### #6 - 01/03/2011 01:30 PM - m c

- File beem-log.txt added

Your username should be a full JID ; user@server. only the user part is used to authenticate.

Ok, however the connection fails and returns "wrong password or user". Using the same username and password, I can connect with my computer. Is there character limitation for the password? It contains characters like #, ' and so on.

--> It seems that I was using a buggy web page to check my password on the apinc.org server. There is no problem with the password when using beem.

Can you provide us a stack trace with logcat ?

Ok, I tried to reproduce the problem, in fact, it is not so easy. Until now, I thought that the problem occurred every time.

However, it seems that the problem occurs only if you previously abort a connection. Example:

- I try to connect with:

User: user@server

Password: password

Server: server

- I abort the connection

- I change the username to "user" (remove @server)

- I try to connect.

- Then the program leaves.

Notice, I'm using the 0.1.4 found on android market.

You will find here the trace obtained with aLogcat, it seems that all begin with this line:

W/dalvikvm(14686): threadid=39: thread exiting with uncaught exception (group=0x2aaca450)

Best regards,

M. Charbonnier.

#### #7 - 01/16/2011 01:25 PM - Nikita Kozlov

- Status changed from Feedback to Resolved

- % Done changed from 0 to 100

I have unsuccessfully tried to reproduce your crash by following your indications.

Also, looking at your log, it looks like that something went bad in PrivacyListManager code so I have commented the line that initializes it in xmppconnection creation (anyway, since it's unfinished/untested it was a bad idea to let it be initialized).

It will be helpful if you could retest with the (at least) tonight nightlybuild or with the future 1.5 release.

#### #8 - 01/24/2011 11:55 AM - Frédéric Barthéléry

- Status changed from Resolved to Closed
