<b>Description</b>			
Hi friends,			
I setup Openfire + Spark, and it can successfully creating account, login and communicate.			
However, when I use the same account to login, error "Connection failed. No response from server." turned up at if (!mConnection.connect()) { mErrorMessage = mConnection.getErrorMessage(); return false; }			
I am using <a href="mailto:anton@im.gyt.com">anton@im.gyt.com</a> to login, which is same as it is in Spark. Could you please advice that what is the problem for the connection?
