Target version:				

Description

Please add support for XEP-0280 "Message Carbons". It allows clients to subscribe to carbon copies of messages sent to/from other clients. Very useful in a mobile environment as it enables the user to continue a conversation they had on another device and visa versa *without* requiring the mobile device to be connected to the server at all times.

This should require little work on the side of the client.
http://xmpp.org/extensions/xep-0280.html

Testing notes: The most recent versions of Gajim (client) and Prosody (server) support XEP-0280.

Subtasks:

Feature # 465: XEP-0297: Stanza Forwarding	**New**

History

#1 - 07/18/2013 03:45 PM - Kevin Cox

I would also love this feature. It seems more natural then the default to me. This is also supported by an ejabberd plugin.

#2 - 12/03/2013 02:42 PM - Florian Schmaus

New versions of aSmack come with XEP-280 and XEP-297 support
